# The SandBagger® Golf Event / Tournament Organizer

Version 10  
 25<sup>th</sup> Anniversary  
 Edition

The SandBagger® is SweetSpot Software's Golf Event / Tournament Organizer software application. This software assists users with management of all aspects of golf competition registration, scoring and documentation.

## Features:

With the SandBagger® you can:

- Define any number of golf tournament Events;
- Configure golf facilities which will be used for Event Competitions;
- Configure any number of Event Competitions (over multiple days if needed – useful for long duration events such as league play). Medal (individual and two person team), Four Person Team and Stableford competitions are supported, but match play is not. All competitions can be configured in flights, and for separate men's and ladies' competitions. This application cannot be used to create official player handicap factors, but for players without handicaps, it will create an equivalent factor for each using the player's average score. Competition handicapping is available as follows:

Competition Types:		Handicap Methods Available:				
		Callaway	Peoria	Manual	HHL*	None
Medal	Individual Play	X	X	X		X
	Two Person Team Play			X		
Four Person Team	Scramble Play			X	X	X
Stableford	Individual Play					X

( \* The HHL Handicap System® is a proprietary SweetSpot Software system which allows four person scramble teams to be created and handicapped with any combination of player capabilities on a team. )

- Enter registration information for each event, entering player information to the level of detail required (a comprehensive player information database capability is included) ;
- Score each competition, using the handicapping methods shown above. If you have a portable scanner (Plustek OpticSlim M12 or equal), you can enter hole scores via Optical Mark Recognition cards (a card template is supplied with the SandBagger software);
- Generate a large variety of reports through each step of the event (e.g. configuration, registration, tee assignment, scoring). You can also print scorecards, a variety of player labels, and export player and event data to an Excel spreadsheet or an Access database. Player statistics reports for Medal and Stableford competitions are included.

## Advantages of Using the SandBagger® :

- Efficient use of time and resources - no need for manual scoring methods, multiple spreadsheets and other tools since all requirements are met with one simple easy-to-use application! Help is available at every step of the event organizing process.
- Scoring accuracy is ensured as all single day handicap calculations are performed programmatically.
- Easy archiving is possible – if reports included with the application don't meet your needs, all records can be easily exported, allowing additional reporting capability, audits and long term analysis of specific types of competition scoring data.

## Installation:

- **System Requirements:**  
 Operating System: Windows PC (Vista or Windows 7);  
 (Certain installation restrictions apply – see the Installation Details available at the ICSE Group website)  
 Memory: 100 MB required on the install hard disk
- **Compatibility:**  
 Versions 10 and higher of this application are NOT compatible with previous versions of the SandBagger (versions 9 and lower). This application is digitally signed, but users may need to adjust security settings to allow the application to run.
